Title Modified of Single Deepest Vertical Detection (SDVD) Algorithm for Amniotic Fluid Volume Classification

Abstract Abstract - Amniotic fluid a crucial role in ensuring the well-being of the fetus during pregnancy and is contained within the amnion cavity, which is surrounded by a membrane. Several studies have shown that volume of amniotic fluid can vary throughout pregnancy and is closely linked to the health and safety of the fetus. This indicates that it is essential to perform accurate measurement and identification of its volume. Obstetric specialist often use a manual method to identify amniotic fluid by visually determining the longest straight vertical line between the upper and lower boundaries. Therefore, this study aims to develop detection model, known as modified Single Deepest Vertical Detection (SDVD) algorithm to automatically measure the longest vertical line by following medical rules and regulations. SDVD algorithm was designed to measure the depth of amniotic fluid vertically by searching the column of pixels that comprised the image sample, excluding any intersection with the fetal body. Performance testing was carried out using 130 images by comparing the manual measurement results obtained by obstetric specialists and the proposed model. Based on the experimental results using modified SDVD, the average accuracy, precision, and recall achieved for amniotic fluid classification were 92.63%, 85.23%, and 95.6%, respectively.

Editor Subject: [JUITA] Editor Decision [DELETE](#)

2023-08-15 08:38 AM

The following message is being delivered on behalf of JUITA.

Dr Putu Desiana Wulaning Ayu Ayu:

We have reached a decision regarding your submission to JUITA : Jurnal Informatika, "Modified of Single Deepest Vertical Detection (SDVD) Algorithm for Amniotic Fluid Volume Classification".

Our decision is: Revisions Required.

Comments and suggestions from reviewers can be seen at the end of the email. To make checking easier the manuscript correction, we suggest that you write a revision note by filling in the matrix containing the corrections given by the reviewer and the part of the manuscript you have corrected (an attached file, "MATRIX OF REVISION NOTE"). Give a different color to the revised part of the manuscript. After the matrix is filled in, please concatenate at the last part of the revised manuscript. Please complete this manuscript with all author names, affiliations, and email addresses. Ensure the author has complied with the script writing rules by the template provided regarding the IMRAD model, presentation of tables, figures, and equations. The author must ensure that the DOI is included in references originating from journal articles.

As per the author's guidelines, author must include the results of a plagiarism check with a maximum percentage of 20% after revision. Please revise the manuscript and return it to JUITA within a maximum of 30 days.

Best Regards,

Hidayati Mustafidah
Universitas Muhammadiyah Purwokerto
jurnal.juita@ump.ac.id

Reviewer notes:

This manuscript is good, but there are only a few editorial things that need to be corrected:

- please use only numbers to cite references, not use names
- What does Fig. 2 describe? Please cite the figure in the body of the manuscript
- all authors' names in references must be mentioned, not using "et al."
- complete with DOI on references sourced from journals.

Dr Putu Desiana Wulaning Ayu Ayu:

We have reached a decision regarding your submission to JUITA : Jurnal Informatika, "Modified of Single Deepest Vertical Detection (SDVD) Algorithm for Amniotic Fluid Volume Classification".

Our decision is to: Accept Submission.

Congratulations, your manuscript has been accepted for publication in JUITA. Next, we will provide an APC payment invoice; we will then do layout the manuscript. In the last stage, we asked the author to do proofreading.

Best Regards,

Hidayati Mustafidah
